1.Module Classification Information

Z X 2 4 0 6 4 R－Y Y H－ VZ#
① ②   ③   ④   ⑤ ⑥ ⑦   ⑧

① Brand：WINSTAR DISPLAY CORPORATION
② Display Type：H→Character Type, G→Graphic Type
③ Display Font： 240 x 64dots
④ Model serials no.
⑤ Backlight Type：　　N→Without backlight　　　T→LED, White
　　　　　　　　　　　B→EL, Blue green　　　　A→LED, Amber
　　　　　　　　　　　D→EL, Green　　　　　　R→LED, Red
　　　　　　　　　　　W→EL, White　　　　　　O→LED, Orange
　　　　　　　　　　　F→CCFL, White　　　　　G→LED, Green
　　　　　　　　　　　Y→LED, Yellow Green
⑥ LCD Mode：　　　　B→TN Positive, Gray　　　 T→FSTN Negative
　　　　　　　　　　　N→TN Negative,
　　　　　　　　　　　G→STN Positive, Gray
　　　　　　　　　　　Y→STN Positive, Yellow Green
　　　　　　　　　　　M→STN Negative, Blue
　　　　　　　　　　　F→FSTN Positive
⑦ LCD Polarize　　　A→Reflective, N.T, 6:00　　H→Transflective, W.T,6:00
　　Type/ Temperature D→Reflective, N.T, 12:00　K→Transflective, W.T,12:00
　　range/ View　　　G→Reflective, W. T, 6:00　C→Transmissive, N.T,6:00
　　direction　　　　J→Reflective, W. T, 12:00　F→Transmissive, N.T,12:00
　　　　　　　　　　B→Transflective, N.T,6:00　I→Transmissive, W. T, 6:00
　　　　　　　　　　E→Transflective, N.T.12:00 L→Transmissive, W.T,12:00
⑧ Special Code　　　V : Built in Negative voltage　Z:ICNT7086
　　　　　　　　　　#:Fit in with the ROHS Directions and regulations

2.Precautions in use of LCD Modules

(1)Avoid applying excessive shocks to the module or making any alterations or modifications to it.

(2)Don't make extra holes on the printed circuit board, modify its shape or change the components of LCD module.

(3)Don't disassemble the LCM.

(4)Don't operate it above the absolute maximum rating.

(5)Don't drop, bend or twist LCM.

(6)Soldering: only to the I/O terminals.

(7)Storage: please storage in anti-static electricity container and clean environment.

(8) Winstar have the right to change the passive components, including R3,R6 & backlight adjust resistors. (Resistors,capacitors and other passive components will have different appearance and color caused by the different supplier.)

(9)Winstar have the right to change the PCB Rev. (In order to satisfy the supplying stability, management optimization and the best product performance...etc, under the premise of not affecting the electrical characteristics and external dimensions, Winstar have the right to modify the version.)

3.General Specification

Item	Dimension	Unit
Number of Characters	240 x 64dots	—
Module dimension	180.0 x 65.0 x 15.6 (MAX)	mm
View area	133.0 x 39.0	mm
Active area	127.16 x 33.88	mm
Dot size	0.49 x 0.49	mm
Dot pitch	0.53 x 0.53	mm
LCD type	STN Positive, Yellow Green Transflective (In LCD production, It will occur slightly color difference. We can only guarantee the same color in the same batch.)	
Duty	1/64	
View direction	6 o'clock	
Backlight Type	LED Yellow Green	

4.Absolute Maximum Ratings

Item	Symbol	Min	Typ	Max	Unit
Operating Temperature	T_{OP}	-20	—	+70	℃
Storage Temperature	T_{ST}	-30	—	+80	℃
Operating Humidity （*1)			75	80	%
Input Voltage	V_I	Vss	—	V_{DD}	V
Supply Voltage For Logic	V_{DD}-V_{SS}	-0.3	—	+4.5	V
Supply Voltage For LCD	V_{DD}-V_0	0	—	15	V
Negative Voltage Output	V_{EE}	—	10	—	V
LED Forward Current	I_F	—	—	1320	mA

*1 : Operating on Humidity 90%,the LCM can stand 96 hours no damage.

5.Electrical Characteristics

Item	Symbol	Condition	Min	Typ	Max	Unit
Supply Voltage For Logic	V_{DD}-V_{SS}	—	3.5	3.9	4.4	V
Supply Voltage For LCD	V_{DD}-V_0	Ta=-20℃	—	—	—	V
		Ta=25℃	13.6	14.0	14.4	V
		Ta=+70℃	—	—	—	V
Input High Volt.	V_{IH}	—	$0.7V_{DD}$	—	V_{DD}	V
Input Low Volt.	V_{IL}	—	0	—	$0.2V_{DD}$	V
Output High Volt.	V_{OH}	—	$0.7V_{DD}$	—	V_{DD}	V
Output Low Volt.	V_{OL}	—	0	—	$0.2V_{DD}$	V
Supply Current	I_{DD}	-	—	30	—	mA

6.Optical Characteristics

Item	Symbol	Condition	Min	Typ	Max	Unit
View Angle	(V)θ	CR$\geqq$2	20	—	40	deg
	(H)φ	CR$\geqq$2	-30	—	30	deg
Contrast Ratio	CR	—	—	3	—	—
Response Time	T rise	—	—	150	200	ms
	T fall	—	—	150	200	ms

Definition of Operation Voltage (Vop)　　　**Definition of Response Time (Tr , Tf)**
[Negative type]　　　　　　　　　　　　　　　　[Negative type]
Conditions :

Operating Voltage : Vop　　　Viewing Angle(θ , φ) : 0°,　0°

7.Interface Description

Pin No.	Symbol	Level	Description
1	A	—	Power Supply For LED +
2	Vss	—	GND
3	Vdd	—	Power supply
4	Vo	—	Power supply for LCD driver
5	/WR	L	Data write. Write data into RA8820 when WR = L
6	/RD	L	Data read. Read data from RA8820 when RD = L
7	/CE	L	L : Chip enable
8	C/D	H / L	WR=L , C/D=H : Data write C/D=L: Command Write
9	Vee	—	Negative voltage output
10	/RESET	H / L	H : Normal ; L : Initialize RA8820
11	DB0	H / L	Data bus line
12	DB1	H / L	Data bus line
13	DB2	H / L	Data bus line
14	DB3	H / L	Data bus line
15	DB4	H / L	Data bus line
16	DB5	H / L	Data bus line
17	DB6	H / L	Data bus line
18	DB7	H / L	Data bus line
19	BUSY	H / L	Active high or low busy signal. The RA8820 can't be access when BUSY pin is high. It's should be connected to MPU I/O input. The MPU have to poll this pin before accessing RA8820.
20	INT	—	Active high or low Interrupt signal

9.2 Register Description

REG [00h] LCD Controller Register (LCR)

Bit	Description	Text/Graph	Default	Access
7-6	Power Mode 11: Normal Mode 10: Standby Mode 01: Sleep Mode 00: Off Mode **Normal mode:** When RA8820 is in normal mode it can execute full functions include RAM read/write, register read/write, LCD display valid signal. **Standby mode:** When RA8820 is in standby mode, except DDRAM/ROM access function is prohibited, others are working and so does LCD display function. **Sleeping mode:** When RA8820 is in sleeping mode, the DDRAM/ROM access and LCD display are prohibited, but register access is permitted. **Off mode:** When RA8820 is in off mode, all above functions enter power off mode, except the wake-up trigger block. If wake-up event occurred, RA8820 would wake-up and return to Normal mode.	--	11h	R/W
5	Software Reset: 1: Reset all registers except flushing RAM 0: Normal operation		0h	R/W
4	Set Auto_reset function When the bit is Enable, if RA8820 doesn't get a full command or data within 2msec, then RA8820 will ignore it. 1: Enable Auto_reset function 0: Disable Auto_reset function		0h	R/W
3	Display mode selection 1: Character mode The written data will be treated as a GB/BIG/ASCII code. 0: Graphical mode The written data will be treated as a bit-map pattern.		1h	R/W
2	Set Display on or off. The bit can control LCD Driver Interface signals DISP_OFF signal control 1: DISP_OFF pin output high 0: DISP_OFF pin output low.	Text/Graph	1h	R/W
1	Blink mode selection 0: Normal display 1: Blink full screen. The blink time is set by CBTR.	Text/Graph	0h	R/W
0	Inverse mode selection 1: Normal display 0: Inverse full screen. It will cause all data stored in DDRAM inversed.	Text/Graph	1h	R/W

REG [10h] Cursor Control Register (CCR)

Bit	Description	Text/Graph	Default	Access
7	Auto Increase Cursor Position in reading DDRAM operation. 1: Enable 0: Disable	Text/Graph	**1H**	**R**
6	Chinese/English character alignment 1: Enable 0: Disable The bit only valid in character mode, that can align full-size and half-size mixed font	Text	**1H**	**R/W**
5	Store Current Data to DDRAM 1: Store Current Data to DDRAM directly 0: Store Current Data to DDRAM Inversely	Text	**1H**	**R/W**
4	Set Bold font (character mode only) 1: Store Data shift 1 + origin data (Black Font) 0: Store Data Normality (origin Font)	Text/Graph	**1H**	**R/W**
3	Auto Increase Cursor Position in writing DDRAM operation. 1: Enable 0: Disable	Text/Graph	**0H**	**R/W**
2	Cursor display control 1: Set cursor on 0: Set cursor off	Text/Graph	**0H**	**R/W**
1	Cursor blink control 1: blink Cursor. The blink time is determined by register[80h] BTR 0: Normal	Text/Graph	**0H**	**R/W**
0	Set Cursor width 1: Cursor width is auto adjust by input data 0: Cursor is fixed at one byte width	Text	**0H**	**R/W**

REG [20h] Active Window Right Register (AWRR)

Bit	Description	Default	Access
7-6	Reserved	**0H**	**R**
5-0	Active window right position ➜ Segment-Right	Table 10-2	**R/W**

Note: REG [20h, 30h, 40h, 50h] are used for the function of change line and page. Users can use these four Registers to set a block as an active window. When data goes beyond the right boundary of active window (The value is set by REG [20h, 30h, 40h, 50h]), then the cursor will automatically change the line and write in data continuously. It means the cursor will move to the left boundary of active window, which is set by REG [40h]. When the data comes to the bottom line of the right side (set by REG [20h and 30h]), then the cursor will be moved to the first line of the left side automatically and continue to put in data. (set by REG [40h, 50h]).

REG [30h] Active Window Left Register (AWBR)

Bit	Description	Default	Access
7-0	Active window bottom position Common-Bottom	Table 10-1	**R/W**

REG [40h] Active Window Bottom Register (AWLR)

Bit	Description	Default	Access
7-6	Reserved	**0H**	**R**
5-0	Active window left position Segment-Left	**0H**	**R/W**

REG [50h] Active Window Top Register (AWTR)

Bit	Description	Default	Access
7-0	window top position ➜ Common-Top	**0H**	**R/W**

REG [60h] Cursor Position X Register (CPXR)

Bit	Description	Default	Access
7-6	Reserved	0H	R
5-0	Set the cursor Segment address	0H	R/W

REG [70h] Cursor Position Y Register (CPYR)

Bit	Description	Default	Access
7-0	the cursor Common address	0H	R/W

REG [80h] Cursor Blink Time Register (BTR)

Bit	Description	Text/Graph	Default	Access
7-0	The Blink one unit time scale is the frame rate scale Blinking time = Bit [7..0] x (1/Frame_Rate) Frame Rate setup depends on the LCD panel.	Text/Graph	23H	R/W

REG [90h] Shift Clock Control Register (SCCR)

Bit	Description	Default	Access
7-0	Setup the XCK signal cycle **OCKR = (SCLK*4)/(Column*Row*FRS)** SCLK: System Clock (Hz) DBW: 4(Bit) Column: Column of Display Screen (Pixel) Row: Row of Display Screen (Pixel) FRS: Frame Rate/Sec **Note: OCKR initial setup** **OCKR=MA[7..0] during reset period.**	Table10-2	R/W

REG [A0h] Interrupt Setup & Status Register (INTR)

Bit	Description	Default	Access
7	Busy Status 1: RA8820 is busy. The MPU have to wait until Busy Status is released 0: RA8820 is idle ready for MPU access.	Table10-2	R/W
6	Touch Panel detect 1: Touch Panel touched 0: Touch Panel untouched	0H	R
5	Cursor Column status 1: The Cursor Column is equal to INTX 0: The Cursor Column is not equal to INTX	0H	R
4	Cursor Row status 1: The Cursor Row is equal to INTY 0: The Cursor Row is not equal to INTY	0H	R
3	Busy interrupt mask 1: Enable Busy to generate Interrupt output 0: Disable Busy to generate Interrupt output	0H	R
2	Touch Panel interrupt mask 1: Generate interrupt output if touch panel was detected. 0: Don't generate interrupt output if touch panel was detected.	0H	R/W
1	INTX event occur INT or not 1: Enable INTX Interrupt 0: Disable INTX Interrupt	0H	R/W
0	Set INTY occur INT or not 1: Enable INTY Interrupt 0: Disable INTY Interrupt	0H	R/W

REG [B0h] Interrupt Column Setup Register (INTX)

Bit	Description	Default	Access
7-6	Reserved	0H	R
5-0	Setup interrupt column address If Cursor Position X Register (CPXR)=INTX, a interrupt has occurred	27H	R/W

REG [B8h] Interrupt Row Setup Register (INTY)

Bit	Description	Default	Access
7-0	Setup interrupt Row address If Cursor Position Y Register (CPYR)=INTY, a interrupt has occurred	EFh	R/W

REG [C8h] Touch Panel Data Register (TPDR)

Bit	Description	Default	Access
7-0	This register keeps the touch panel active position (Column, Row)	0H	R

REG [D0] LCD Contrast Control Register (LCCR)

Bit	Description	Default	Access
7	LCD contrast control 1: Disable 0: Enable	1H	R/W
6	LCD contrast control DAC write enable 1: Don't allow MPU to write data to DAC Bit [4~0] 0: Allow MPU to write data to DAC Bit [4~0]	1H	R/W
5	Reset LCD contrast control function 1: Normal operation 0: DAC is reset. Set the Iout to 0 uA	1H	R/W
4-0	Set the LCD Brightness Control Iout Value (DAC Bit [4~0]) 00000b 0µA (Min. Current) : : 11111b 1mA (Max. Current)	0H	R/W

REG [E0h] Pattern Data Register (PDR)

Bit	Description	Text/Graph	Default	Access
7-0	Setup the Pattern Data When REG[F0h] bit3 is '1', it will read the data from Register [E0h] and fillthe whole DDRAM. After the movement of filling the Active window, REG[F0h] bit3 will become "0".	Graph	0H	R/W

REG [F0h] Font Control Register (FCR)

Bit	Description	Text/Graph	Default	Access
7	External Character ROM control 1: Enable. 0: Disable.		01H	R/W
6	ROM BANK Selection 1: External Font ROM select 0: Internal Font ROM select		00H	R/W
5-4	Set Font ROM Translate 01: Support BIG5 font ROM 10: Support GB font ROM		00H	R/W
3	Fill Data to DDRAM 1: no action 0: Fill Data to DDRAM Enable	Graph	00H	R/W
2	Font ROM range select 1: Enable 0: Disable When the bit is '1', input data is ASCII code When the bit is '0', the input data<A0h it is as ASCII code 　　　　　　　the input data≡A0h it is as GB/BIG5 code 　　　　　　　Enable CLK_OUT1: Active_ window		00H	R/W
1-0	ASCII Block Select bit 1~0 0 0: Map to ASCII block 0 0 1: Map to ASCII block 1 1 0: Map to ASCII block 2 1 1: Map to ASCII block 3		00H	R/W

REG [08h] Misc. Register (MIR)

Bit	Description	Default	Access
7	Reserved	1H	R
6	ENABLE CLK OUT 1: Enable CLK_OUT 0: Disable CLK_OUT	1H	R/W
5	Window Mode Select 1: Active_ window 0: Display_ window	0H	R/W
4	Set INT and Busy Polarity 1: Set High_ Active mode 0: Set Low_ Active mode	0H	R/W
3-2	Reserved	0H	R
1-0	Clock speed selection 0 0：1MHz 0 1：2MHz 1 0：4MHz 1 1：8MHz		

REG [18h] Cursor Size Control Register (CSCR)

Bit	Description	Text/Graph	Default	Access
7-4	Setup the height of cursor (default value is 2)	TEXT	0010H	R/W
3-0	Setup the distance of row to row	TEXT	0010H	R/W

REG [28h] Display Window Right Register (DWRR)

Bit	Description	Default	Access
7-6	Reserved	0H	R/W
5-0	Set Display Window Right position　Segment-Right Segment-Right = (Segment Number / 8) – 1 If LCD panel size is 320*240, the value of the register is: (320 / 8) - 1 = 27h	0H	R/W

Note: REG[28h, 38h, 48h, 58h] is used to set Display Window。Users can set the viewing scope of Display RAM. Column

Address can be set between 0~39, and Row Address can be set between 0~239. Users can set start and end address

first, and then by adding shift function to present the effect of rolling.

REG [38] Display Window Bottom Register (DWBR)

Bit	Description	Default	Access
7-0	Display Window Bottom position　Common-Bottom Common_ Bottom = LCD Common Number –1 If LCD Panel is 320x240，the value of the register is: $240 - 1 = 239 = EFh$	Table 10-2	R/W

REG [48] Display Window Left Register (DWLR)

Bit	Description	Default	Access
7-0	Display Window Left position ➜ Segment-Left Usually set "00h".	0H	R/W

REG [58] Display Window Top Register (DWTR)

Bit	Description	Default	Access
7-0	Display Window Top position ➜ Common-Top Usually set "00h".	0H	R/W

NOTE:

Please look at this example of how to set the default value of the Register.

1. AWRR≧CPXR≧AWBR, AWRR≧INTX≧AWBR

2. AWLR≧CPYR≧AWTR, AWLR≧INTY≧AWTR

10. Function Description

10.1 MPU Interface

The RA8820 enters 8-bit bus interface mode when the SYS_DB pin is set high. The RA8820 can interface with the MPU via an I/O port. Instruction is executed when data is written into the register. In this case, only the register can be read (busy check, etc). In this case, check the busy flag when accessing (polling), or appreciate connect Busy pin to MPU Interrupt with the exact polarity it can useful reduce MPU polling effort, or insert an interval considering the execution time and perform the next access when the internal process has completely finished. The instruction execution time depends on the RA8820 operation frequency. When using the internal oscillator circuit of the RA8820, the instruction time will change as the oscillation frequency does.

The RA8820's MPU interface support Intel (8080) or Motorola (6800) 4/8 bits data bus, RA8820 lead the setup data while reset period via LD [7..0].

Table 10-1 Hardware Pin Setup Description

Bit	Signal	Description	"1" mean	"0" mean
7	SYS_MI	MPU Type	M6800	I8080
6	SYS_DB	MPU Data Bus	8_bit	4_bit
5	SYS_FQ	Clock Select	PLL_CLK	RC Osc_CLK
4	--	--	--	--
3	SYS_LD	LCD Data Bus	8_Bit	4_Bit
2	SYS_PLR	RS Polarity Select	Note1	Note2
1	X1	Operation Mode	Set → "1"	
0	X2			

Note1: '1' indicate DB[7..0] are display data; '0' indicate DB[7..0] are register data

Note2: '1' indicate DB[7..0] are register data; '0' indicate DB[7..0] are display data

10.2 Command/Decoder register circuit

This circuit store and implement the command from MPU Interface. The Register [00h, 08h, 10h] treats the whole chip and cursor setup. The Register [20h, 30h, 40h, 50h] can setup the work range maximum and minimum limit. When appreciate setup with Register [10h] bit3, [F0h] bit3 and [60h, 70h] the RA8820 can offer powerful variety meet various application.

The Register [28h, 38h, 48h, 58h] can satisfy various LCD display from (0,0)~(320,240) pixels. Powerful INT via Register [A0h, B0h, B8h] reduce MPU polling cycle to Interrupt interactive utility. Therefore we can use low end CPU to cost down and help the whole system reduce BOM cost.

10.3 Busy Flag

The Busy flag is set when the RA8820 is too busy to write RAM data. During operation, RA8820 can accept as normal operation expect write data to display data RAM. RA8820 accepts read status instruction only. The busy flag signal is output at pad DB7 when read status is issued. If the cycle time is correct, the microprocessor need not check the flag before issuing a command. This can greatly improve the microprocessor performance.

10.4 INT

When appreciate setup register [A0h, B0h, B8h]. RA8820 can assert INT signal which the cursor go to the interrupt position, it is useful to help system developer to apply two or more RA8820 to driver large panel. example: Panel size is 640×480→Column×Row.

10.5 Display Data RAM (DDRAM)

Display data RAM (DDRAM) stores bit mapping pixel data and display attribute codes for displaying data. A fullsize font is displayed using two bytes, and a half-size font is displayed using one byte. DDRAM displays only that data stored within the range corresponding to the DDRAM. Data stored outside the range is ignored. Refer to combined display of full-size and half-size characters for details on character codes stored in DDRAM.

The display data RAM stores pixel data for LCD. It is a 240 column by 320 row addressable array maximum. The time required to transfer data is very short. The microprocessor writes and reads data to/from the RAM through data bus. As the LCD controller operates independently, data can be written into the RAM at the same time as the data is being displayed, without the LCD to flicker. If apply to the character/graphical mix mode. RA8820 can easy store and display the data/picture which user desired.
Figure 10-1 Display data to LCD map

10.6 Display Timing Generator

This section explains how the display timing generator circuit operates.

10.6.1 Signal Generation to Line Counter and Display Data Latch Circuit

The display data clock (XCK) generates a clock to the line counter and a latch signal to the display data latch circuit. The line address of the display RAM is generated in synchronization with the display clock. Display data is latched by the display data latch circuit in synchronization with the display clock and output to the Column LCD drive data bus. The display data is send to the LCD drive circuit completed independent of access to the display data RAM from the microprocessor.

10.6.2 LCD AC Signal Generation

The display data clock generates an LCD AC signal (FRM). The FRM causes the LCD drive circuit to generate an AC drive waveform.

10.6.3 Row Timing Signal Generation

The display clock generates an internal Row timing signal and a start signal (YD) to the Row driver. A Display clock resulting from frequency division of an oscillation clock is output from the XCK pad.

When an AC signal (FRM) is switched, a high pulse is output as a YD output at the turning edge of the previous display clock.

10.7 ROM

RA8820 embedded 512KByte Font ROM also provide external 512KByte Font ROM Interface can use put the standard and special fonts of BIG5, GB, and ASCII code. It can support the display 16x16 dot for full-size fonts consisting of Chinese, 8x16 dots for half-size fonts of alphanumeric characters and symbols in the same display. For example, when CPU sends Big5 code (2 Bytes), RA8820 will read Font code (32 Bytes) from ROM, which is matching with Big5 code, and then deliver them to DDRAM.

Table106-2 Panel Size Initial Setup

MA[11..8]		Seg×Com (Chi-Font)	Seg×Com (Pixel)	REG[20h]	REG[30h]
0	0000	20×15	320×240	27	EF
1	0001	20×10	320×160	27	9F
2	0010	20×8	320×128	27	7F
3	0011	20×4	320×64	27	3F
4	0100	16×8	256×128	1F	7F
5	0101	15×10	240×160	1D	9F
6	0110	15×8	240×128	1D	7F
7	0111	15×4	240×64	1D	3F
8	1000	10×10	160×160	13	9F
9	1001	10×8	160×128	13	7F
A	1010	10×4	160×64	13	3F
B	1011	10×2	160×32	13	1F
C	1100	12×4	192×64	17	3F
D	1101	8×8	128×128	0F	7F
E	1110	8×4	128×64	0F	3F
F	1111	8×2	128×32	0F	1F

Note: When register [20h, 30h] are reset we can utilize Table10-2 to select panel size

10.9 DAC

RA8820 includes one 5 bit DAC, providing current to make contrast adjustments. Figure 10-4 is the circuit for voltage adjustment.
Figure 10-4 DAC Current to Voltage Regulator

11. Function Application

11.1 Combined Display of Full-Size and Half-Size Characters

The Figure 11-1 shows the ability of RA8820 to show Full-Size and Half-Size Characters

Figure 11-1 Combined Display of Full-Size and Half-Size Characters

Table 11-1 is the character code of Full-Size and Half-Size showed in Figure 11-1.

Table 11-1 Character Code comparison table (BIG5)

11.2 Characteristic Bold Display Function

The figure 11-2 is character bold display and Register setup.

Figure 11-2 Character Bold Display

11.3 Horizontal Smooth Scroll

Data shown on the display can be scrolled horizontally to the left for a specified number of dots. The number ofdots are set in scroll control register [28, 48h].
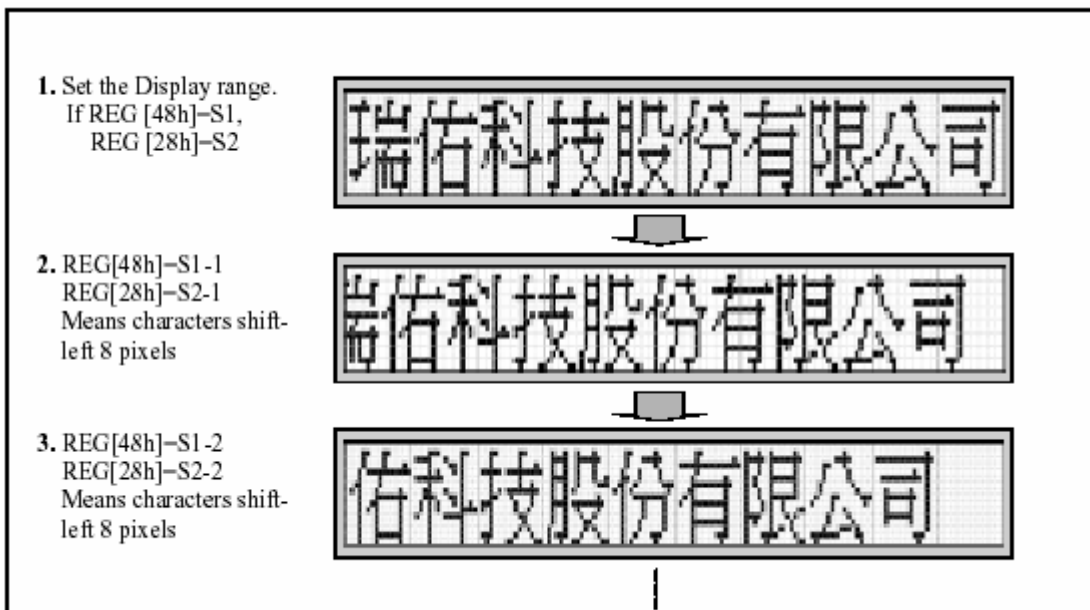

Note: One square means 16*16 pixels

Figure 11-3 Horizontal Smooth Scroll

11.4 Vertical Smooth Scroll

Like Figure 11-4 shows, it can set Active Window. Then setting register to achieve the function of rolling up and down.
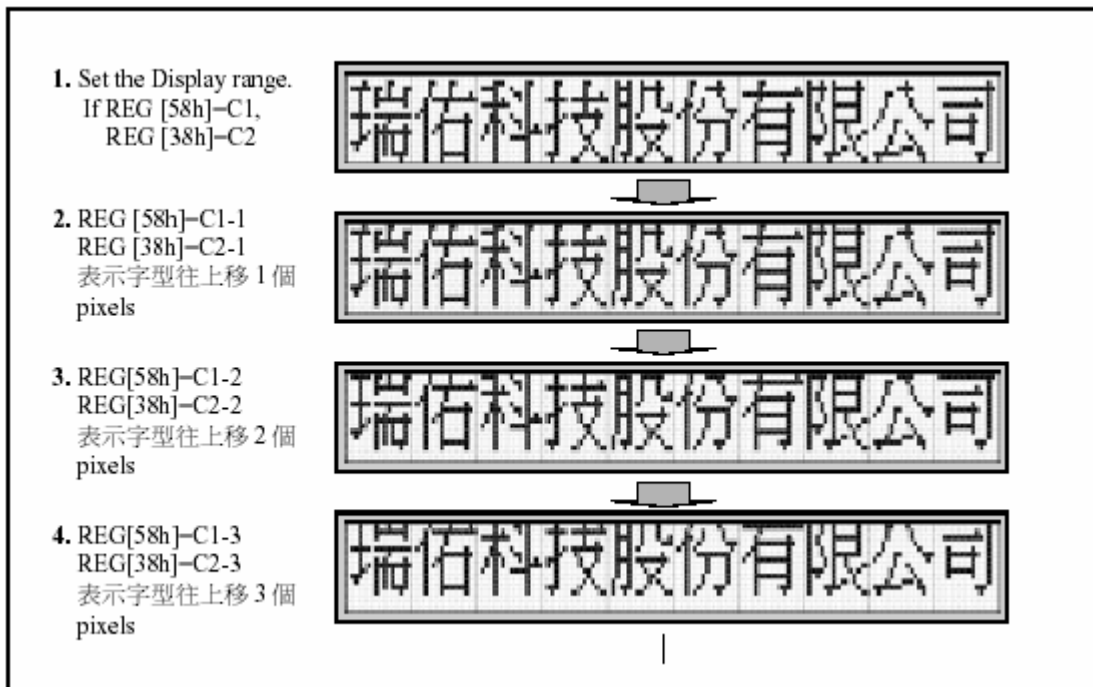

Note: One square means 16*16 pixels

Figure 11-4 Vertical Smooth Scroll

11.5 Graphics Display Function

Figure11-5 shows the function and the value that register need be set under graphics display.

Figure 11-5 Graphics Display

11.6 Blinking Display

Figure11-6 shows the function and the value that register need to be set under blinking display.

Figure 11-6 Blinking Display

11.7 Black-white Display

Figure11-7shows the function and the value that register need to be set under black-white display.
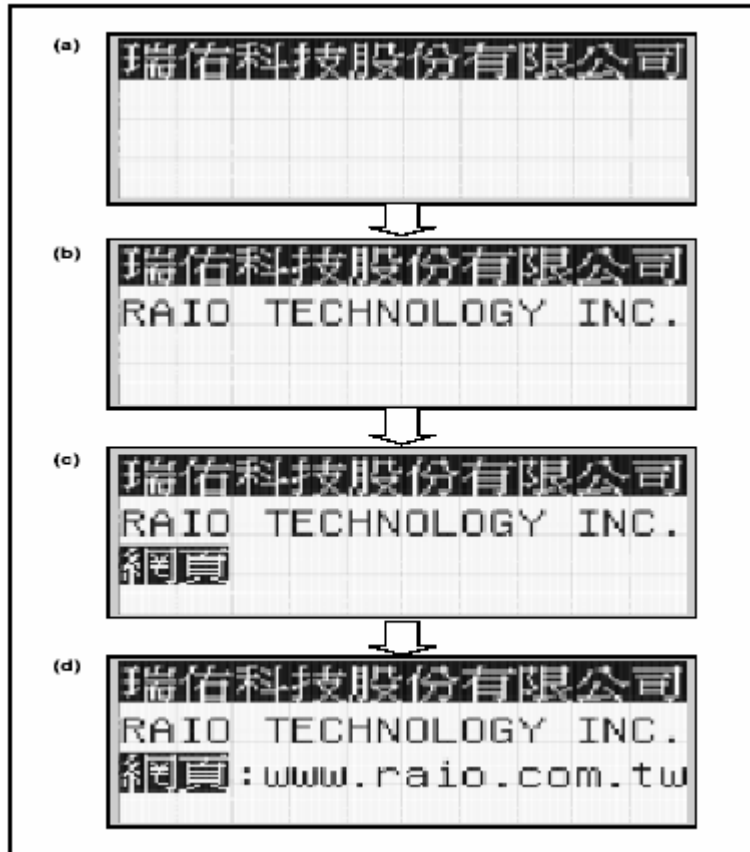

Figure 11-7 Blinking Display

(a)
1. Set REG [10h] bit5=0
2. Write in the Big5 code of "瑞佑科技股份有限公司" then it will show up "瑞佑科技股份有限公司"

(b)
3. Hold on (a)
4. Set REG [10h] bit5=1
5. Write in the Big5 code of "RAIO TECHNOLOGY INC." then it will show up " RAIO TECHNOLOGY INC."

(c)
6. Hold on (a), (b)
7. Set REG [10h] bit5=0
8. Write in the Big5 code of "網頁" then it will show up "網頁"

(d)
9. Hold on (a), (b) and (c)
10. Set REG [10h] bit5=1
11. Write in the Big5 code of ": www.raio.com.tw" then it will show up ": www.raio.com.tw"

11.8 Align the Chinese/English Font

Figure11-8 shows the function and the value that register need to be set under aligning the Chinese/English Font,
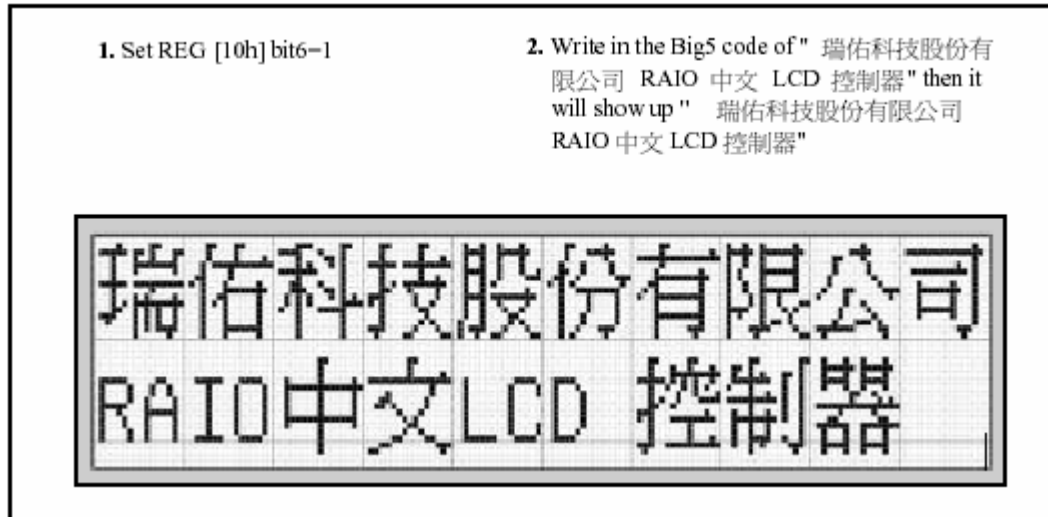

Figure 11-8 Align the Chinese/English Font

11.9 Non_Align the Chinese/English Font

Figure11-9 shows the function and the value that register need to be set under Non_Align the Chinese/English Font.
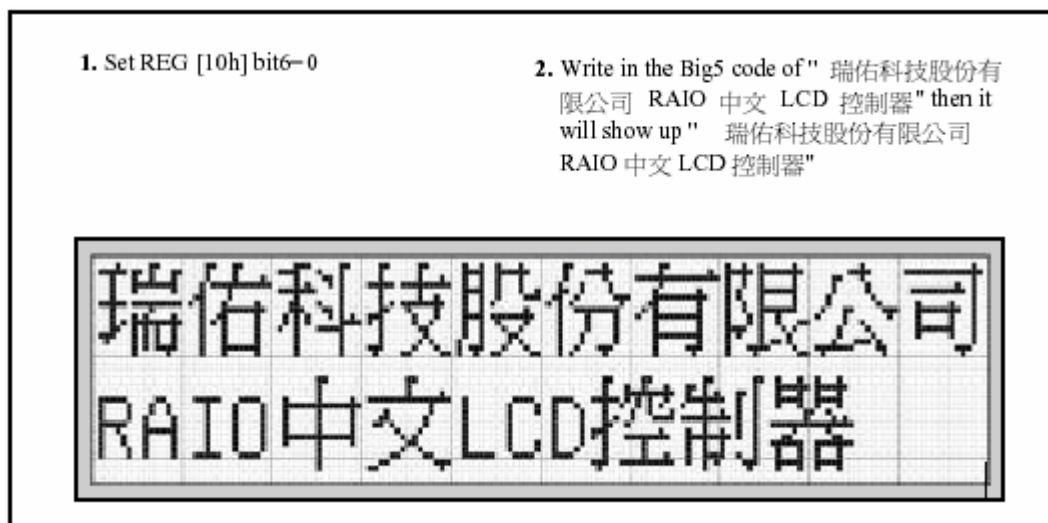

Figure 11-9 Non_Align the Chinese/English Font

12 Timing Characteristics

12.1 MCU Interface of 8080 Series
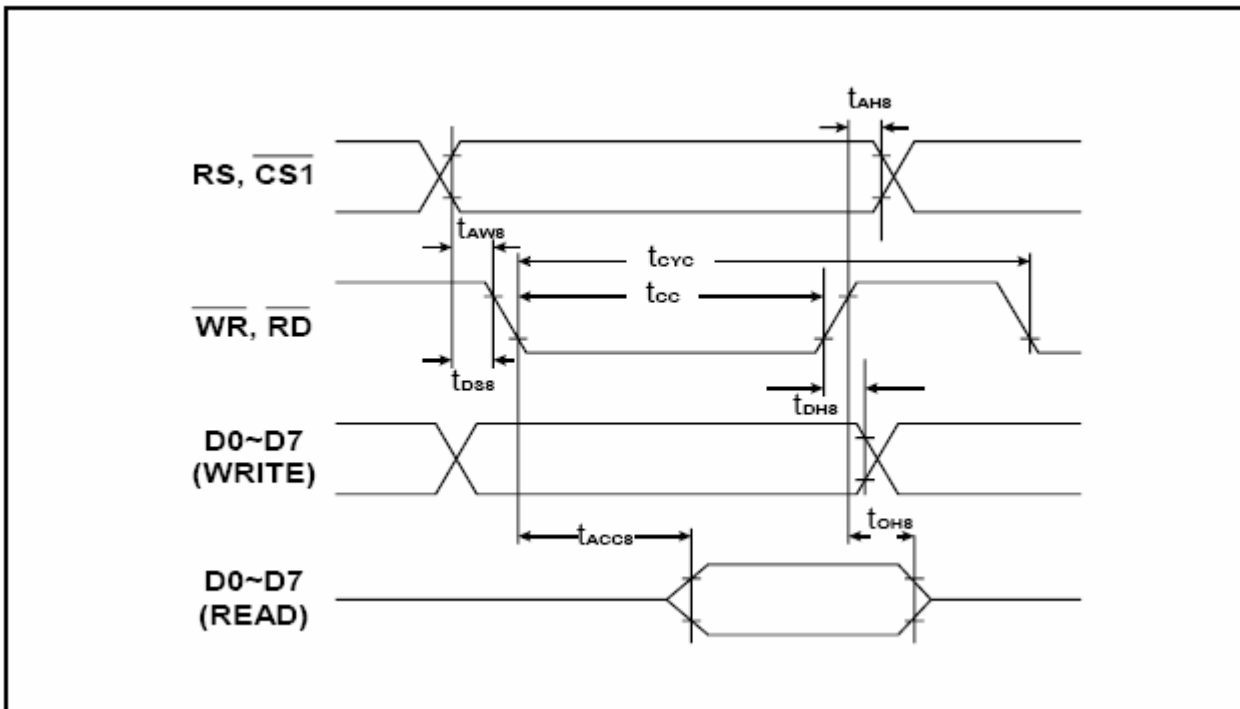

Figure 12-1 8-bit 8080 MCU Access RA8820 Register

| Signal | Symbol | Parameter | Rating | | Unit | Condition |
			Min	Max

14.Reliability

Content of Reliability Test (wide temperature, -20℃~70℃)

Environmental Test			
Test Item	**Content of Test**	**Test Condition**	**Note**
High Temperature storage	Endurance test applying the high storage temperature for a long time.	80℃ 200hrs	2
Low Temperature storage	Endurance test applying the high storage temperature for a long time.	-30℃ 200hrs	1,2
High Temperature Operation	Endurance test applying the electric stress (Voltage & Current) and the thermal stress to the element for a long time.	70℃ 200hrs	____
Low Temperature Operation	Endurance test applying the electric stress under low temperature for a long time.	-20℃ 200hrs	1
High Temperature/ Humidity Operation	The module should be allowed to stand at 60℃,90%RH max For 96hrs under no-load condition excluding the polarizer, Then taking it out and drying it at normal temperature.	60℃,90%RH 96hrs	1,2
Thermal shock resistance	The sample should be allowed stand the following 10 cycles of operation 　　-20℃　　25℃　　70℃ 　30min　　5min　　30min 　　　　1 cycle	-20℃/70℃ 10 cycles	____
Vibration test	Endurance test applying the vibration during transportation and using.	Total fixed amplitude : 1.5mm Vibration Frequency : 10~55Hz One cycle 60 seconds to 3 directions of X,Y,Z for Each 15 minutes	3
Static electricity test	Endurance test applying the electric stress to the terminal.	VS=800V,RS=1.5kΩ CS=100pF 1 time	____

Note1: No dew condensation to be observed.
Note2: The function test shall be conducted after 4 hours storage at the normal
　　　Temperature and humidity after remove from the test chamber.
Note3: The packing have to including into the vibration testing.

17. Material List of Components for RoHs

1. WINSTAR Display Co., Ltd hereby declares that all of or part of products (with the mark "#"in code), including, but not limited to, the LCM, accessories or packages, manufactured and/or delivered to your company (including your subsidiaries and affiliated company) directly or indirectly by our company (including our subsidiaries or affiliated companies) do not intentionally contain any of the substances listed in all applicable EU directives and regulations, including the following substances.

Exhibit A：The Harmful Material List

.

Material	(Cd)	(Pb)	(Hg)	(Cr6+)	PBBs	PBDEs
Limited Value	100 ppm	1000 ppm	1000 ppm	1000 ppm	1000 ppm	1000 ppm
Above limited value is set up according to RoHS.						

2.Process for RoHS requirement：

(1) Use the Sn/Ag/Cu soldering surface；the surface of Pb-free solder is rougher than we used before.

(2) Heat-resistance temp.：

Reflow：250℃,30 seconds Max.；

Connector soldering wave or hand soldering：320℃, 10 seconds max.

(3) Temp. curve of reflow, max. Temp.：235±5℃；

Recommended customer's soldering temp. of connector：280℃, 3 seconds.

18. Recommendable storage

1. Place the panel or module in the temperature 25°C±5°C and the humidity below 65% RH
2. Do not place the module near organics solvents or corrosive gases.
3. Do not crush, shake, or jolt the module
